

The image features a silhouette of a high-voltage power transmission system against a sunset sky. On the left, a tall, lattice-structured transmission tower stands prominently. To its right, a complex network of steel structures, including busbars and support frames, is visible. In the foreground on the right, a large, dark silhouette of a transformer or switchgear is shown. The sky is a mix of light and dark tones, with a bright sun partially obscured by the structures in the center. The overall scene conveys a sense of industrial power and infrastructure.

**KRAFT
POWERCON**

We help you generate enough power

Power plants and transmissions powered by KraftPowercon

We give you continuous availability

A steady and absolutely reliable auxiliary power supply is essential for the generation and transmission of electric energy. Power failures and disruptions in the grid could cause enormous problems and are costly and dangerous. We secure the critical functions of your processes with solutions that guarantee an uninterrupted power supply.

KraftPowercon has a long history within this field. Whether you use hydropower, nuclear power, windmills or combined heat and power in your processes – we know how to give you the highest possible availability at all times.

Our applications energise, for instance, safety systems in everything from power networks and switchgears and we cool down power converters too.

To do all this, we use state of the art technology and rely on a global organisation with many decades of experience and know-how within industrial power supply.

We will never interrupt you

Availability and security are crucial in your business. The auxiliary power supply simply must work to safeguard the critical functions of your processes. Our uninterrupted motor drive (UMD) and DC and AC systems guarantee you an uninterrupted power supply. In the case of a power shortage, they immediately step in and switch to a battery backup that maintains full effect and makes sure the security of your operation is never jeopardised.

Always available - better business

You demand the highest possible availability – we deliver it. First of all, the single fault criterion ensures full functionality even if faults occur. Secondly, our solutions are designed to operate continuously and reliably in all conditions. They will even run on reduced power during service to maximise your output. In short, we guarantee your power supply and the highest possible availability, so you can optimise your core business.

Our standard solution is customised for you

You want safety, cost-efficiency, maximal availability and shorter project lead times. We deliver that with pre-engineered solutions that are configured, dimensioned and engineered to work perfectly in your unique environment. Meticulous work is put into all assignments and every system is rigorously tested before shipping. Our standardised modules make installation quick and easy and thanks to the modular designs they change in line with your business, making them highly flexible and scalable. To summarise: power may go down, but we make sure your business stays uninterrupted.

There are many good reasons to choose KraftPowercon

Every customer has different needs and a unique process. Supplying the right quality requires a lot from a supplier and it must have long-term technical experience and enough know-how to tackle any circumstances. KraftPowercon is that kind of supplier. Our basic idea is to supply products and solutions that reduce life cycle costs and improves your business. Their high reliability cut downtime and associated costs and they can often be repaired on site and run on reduced power to avoid complete standstills. Furthermore, the high efficiency reduces energy consumption, a key issue today as well as in the future. We follow four guiding lights in everything we do:

- 1. You can always count on KraftPowercon**
- 2. KraftPowercon always has something new on the way for you**
- 3. KraftPowercon is right beside you**
- 4. KraftPowercon is your proactive partner**

We focus heavily on quality, and to us this means delivering on time and delivering the desired quality. This, together with our innovative ability, means you get a better value for money when choosing us. You know that we deliver the latest and best products and that we stand by our brand promise: we won't let you down.

Service and after sales are natural to us

Our products are highly reliable and designed for continuous operation, but naturally maintenance, upgrades, repairs, installation assistance, education and training, spare parts and whatever you need to run your operation smoothly are high priorities for us.

How about the future?

We are always exploring new fields and how to improve our offer to you. Our R&D department is constantly fulfilling the needs of today while keeping an ear to the ground to find out what tomorrow brings. Whatever they hear – we will interpret it correctly and act quickly ensuring that our products continue to be as efficient as possible.
