We deliver precisely what you need
Electronics, PCB and semi-conductor productions powered by KraftPowercon
To be in control is a wonderful thing

When it comes to manufacturing small and highly sophisticated circuit boards and semi-conductors there is little time for errors – in fact, less than a millisecond. KraftPowercon has a long history within electrochemical processes and that naturally applies to the plating of extremely sensitive surfaces such as PCBs and semi-conductors. In our increasingly high-tech world, computers, smart phones and tablets need ever smarter, smaller and more efficient circuit boards – we help you produce these by supplying power to your processes. With our precise solutions, you can regulate currents and pulses and control them enough to treat your surfaces with an outstanding precision. To achieve this, we use groundbreaking technology and rely on a global organisation with many decades of experience and know-how within industrial power supply.
Reel-to-reel for real

KraftPowercon plays a central part in your process, by supplying power to the production of reel-to-reel and plating connectors. We are fully aware of the acute needs that come from surfaces being small and we have the products to cope with the extremely tough demands and needs in your line of business.

Perfection is our only deliverable
You need an exact result, without deviations and with perfect timing and form. We know this and customize our solutions and services to guarantee that. In fact, we can’t do it any differently. We know you require specific pulses and correct and quick installations that can be regulated to keep you in absolute control. We know how to secure all this and offer highly efficient solutions. Precision is what you require. That is precisely what you get.

Size matters – the smaller the better
Whether we talk about pulse time, size of the PCB or the semi-conductor, the key words revolve around small, quick, short, exact and precise. All over the world people take mobile and digital devices for granted and want them smaller, faster, better. This puts a strain on you. We relieve some of that pressure by stepping in with solutions that let you produce according to market needs. But, the key is your needs. Tell us what they are, and we will help improve your processes - and your business.
There are many good reasons to choose KraftPowercon

Every customer has different needs and a unique process. Supplying the right quality requires a lot from a supplier and it must have long-term technical experience and enough know-how to tackle any circumstances. KraftPowercon is that kind of supplier. Our basic idea is to supply products and solutions that reduce life cycle costs and improves your business. Their high reliability cut downtime and associated costs and they can often be repaired on site and run on reduced power to avoid complete standstills. Furthermore, the high efficiency reduces energy consumption, a key issue today as well as in the future. We follow four guiding lights in everything we do:

1. You can always count on KraftPowercon
2. KraftPowercon always has something new on the way for you
3. KraftPowercon is right beside you
4. KraftPowercon is your proactive partner

We focus heavily on quality, and to us this means delivering on time and delivering the desired quality. This, together with our innovative ability, means you get a better value for money when choosing us. You know that we deliver the latest and best products and that we stand by our brand promise: we won’t let you down.

Service and after sales are natural to us

Our products are highly reliable and designed for continuous operation, but naturally maintenance, upgrades, repairs, installation assistance, education and training, spare parts and whatever you need to run your operation smoothly are high priorities for us.

How about the future?

We are always exploring new fields and how to improve our offer to you. Our R&D department is constantly fulfilling the needs of today while keeping an ear to the ground to find out what tomorrow brings. Whatever they hear – we will interpret it correctly and act quickly ensuring that our products continue to be as efficient as possible.
